

DAVID MULIADI BUTARBUTAR

Software Engineer

Medan, Indonesia | muliadibutarbutar13@gmail.com | +62 898-2174-339 | [LinkedIn](#)

SUMMARY

Software Engineer with 4+ years of experience in developing, maintaining, and enhancing enterprise web applications using C#, .NET Framework, ASP.NET Web Forms, SQL Server, PostgreSQL, Vue.js, Next.js, RESTful APIs, and Kotlin. Experienced in frontend and backend development, database query optimization, API integration, deployment support, bug fixing, and production system support. Strong background in building internal business systems, approval workflows, reporting modules, and role-based access applications.

TECHNICAL SKILLS

Programming Languages: C#, JavaScript, TypeScript, SQL, Kotlin
Backend: .NET Framework, ASP.NET Web Forms, RESTful API
Frontend: Vue.js, Vue 3, Next.js, React, HTML, CSS, Tailwind CSS
Database: SQL Server, PostgreSQL, Prisma ORM
Tools and Frameworks: Vite, PrimeVue, Vuex, Axios, NextAuth, React Hook Form, Zod, RabbitMQ
Other Skills: API Integration, Query Optimization, Role-Based Access Control, Approval Workflow, Reporting, Deployment Support, Bug Fixing, Production Support

EXPERIENCE

Software Engineer | Wilmar Consultancy Services

February 2022 – Present

- Developed and maintained enterprise web applications using C#, .NET Framework, ASP.NET Web Forms, SQL Server, PostgreSQL, Vue.js, Next.js, RESTful APIs, and Kotlin.
- Built frontend and backend features for internal business applications, including master data, transaction, approval, reporting, and user management modules.
- Integrated RESTful APIs with internal and external systems to support business process automation and data synchronization.
- Improved database performance by writing, reviewing, and optimizing SQL queries.
- Performed bug fixing, system enhancement, deployment support, and production issue investigation.
- Collaborated with QA teams, users, and other developers to deliver application changes, validate requirements, and support release activities.
- Supported existing systems by maintaining application stability, improving workflows, and resolving user-reported issues.

PROJECTS

Facility Management System

- Developed a Facility Management System for managing billing, timesheet, permit, utility, complaint, tenant documents, approval workflows, and reporting.
- Built a frontend single-page application using Vue 3, Vite, PrimeVue, Vuex, and Axios.
- Implemented authentication, role-based menus, form validation, REST API integration, localization, and report export/print features.
- Developed backend features using .NET / ASP.NET Framework to support business logic and data processing.
- Implemented master data modules such as company, customer, location, department, price list, VAT terms, SAP material, approval matrix, and running number.

Transporter Rating System

- Developed a Transporter Rating System using Next.js, TypeScript, PostgreSQL, Prisma, Tailwind CSS, and NextAuth.
- Built role-based access control for Admin, Participant, and Viewer users.
- Implemented modules for master data, survey period, questionnaire builder, survey entry, draft workflow, submission tracking, and audit log.
- Created dashboard and reporting features for transporter performance, including filtering, ranking score, Excel/CSV export, email reminders, and radar chart analysis.
- Integrated PostgreSQL database using Prisma ORM and implemented form validation using React Hook Form and Zod.

Goods Release System

- Developed a Goods Release System for factory goods release processes and reporting using ASP.NET Web Forms and SQL Server.
- Implemented approval matrix workflows to support transaction approval processes.
- Built master data modules including company, location, department, goods type, UOM, goods release reason, document, group, and user.
- Developed transaction modules such as create transaction, transaction list, and approval.
- Developed reporting modules including report list, report detail, and matrix report.

Unmanned Weighbridge System

- Developed and maintained an Unmanned Weighbridge System using .NET desktop applications, ASP.NET Web Forms, RESTful APIs, Kotlin, and SQL Server.
- Improved application and database performance through SQL query tuning and system enhancement.
- Supported automated truck weighing processes integrated with RFID cards and Hikvision face recognition.
- Developed Traffic Control System modules to manage plant access through barrier gates.
- Integrated multiple systems for truck registration, factory entry, security check, and weighing processes.
- Built Android applications using Kotlin to support security check processes after truck registration.
- Supported rollout implementation across several locations in Indonesia.

Learning Dashboard

- Developed a Learning Dashboard using .NET Framework and SQL Server for internal training center reporting.
- Implemented approval workflows using a release matrix feature to automatically determine approvers based on created documents.
- Built master data modules such as company, location, cost list, department, division, grade level, user, release matrix, vendor list and profile, and student list and profile.
- Developed reporting features to support training center data monitoring and internal business processes.

EDUCATION

Del Institute of Technology

Information Technology | GPA: 3.03/4.00

PUBLICATIONS

User Responses of the Development of Language Laboratory System, Vol. 3

Journal publication describing the borrowing process in the Del language laboratory. The application was implemented using the Laravel framework. [Journal Link](#)
